Modeled Impervious Cover Increase Anticipated for Watershed					X

Notes: **The 2013 Comprehensive Plan predicted a 342% increase of impervious cover under the Preferred Scenario of development. Although this may seem alarming, the area is primarily rural, undeveloped, and used for agriculture so any increase in impervious cover will seem high compared to the existing amount of 1.8% at the time the Comprehensive Plan was adopted. The predicted increase in impervious cover is attributed to multiple intensity zones located within the watershed.**
