Background Information:

Pursuant with Sec. 82.066, all regulatory signs where the authority to install is not specifically delegated to the traffic engineer, requires approval from City Council by ordinance.

In April 2020, Hopkins Street was closed between Moore Street and Bishop Street for construction of a capital improvement project for roadway and drainage improvements. The reconstruction project is expected to be completed in 2022.

Hopkins traffic during construction is being detoured along Moore, Craddock, and Bishop streets. However, a significant number of drivers are not following the official detour route and are finding alternate routes through residential streets in the Heritage and Dunbar Neighborhoods. Subsequently, traffic volumes and speeds have increased on several residential streets in the Heritage and Dunbar Neighborhoods.

Pursuant with Texas Transportation Code 545.356 (b-1), the governing body of a municipality may declare a lower speed limit of not less than 25 miles per hour, if the governing body determines that the prima facie speed limit on the highway is unreasonable or unsafe

The Public Services Department conducted traffic engineering studies at eight, representative locations within the study area between September and October of 2020. The Transportation Division evaluated the speed limits of roadways within the impacted residential area by using USLIMIT2. USLIMITS2 is a Federal Highway Administration (FHWA) tool to help practitioners set reasonable, safe, and consistent speed limits for specific segments of roads.

With the exception of Hopkins Street which was not included in the evaluations due to construction, the engineering studies support the conclusion that the current posted speed of 30 m.p.h. in the study area is unreasonable and unsafe and the proposed 25 m.p.h. speed limit reflects the safe and prudent speed limit to maintain roadway safety especially for neighborhood bike and pedestrian traffic.
