Background Information:

Hat Creek is proposing to construct an approximately 4,160 square foot restaurant. The restaurant structure consists of three separate spaces, the covered patio, the interior conditioned space, and the covered cooler/service area.

The applicant is proposing two walls constructed in a fence like manner to enclose the covered cooler and service area at the rear of the building, as well as one side (left) of the covered patio at the front of the building. These walls will be constructed of 1x6 inch cedar boards attached to 4x4 inch cedar posts, with a 1 inch gap between each board. In addition to cedar boards, the applicant is proposing to construct the front patio frame out of cedar columns and beams. The applicant is proposing that the two columns and four beams at the front of the patio, be wrapped in “break metal”, a very thin gauge metal (32nds of an inch) used to mimic the appearance of aluminum. The proposal to have the patio open in the front, allows a view to the interior wall separating the covered patio from the conditioned space. This interior wall separating the conditioned space from the patio is proposed to be primarily aluminum and glass, with cedar siding around the edge.

The breakdown for each façade is as follows:

- Front of patio - 100 % break metal over cedar posts and beams
- Front of conditioned space - 22% brick, 31% cedar siding, 47% glazing
- Right side of building - 67% brick, 14% glazing, 12% cedar siding, 7% cedar boards
- Rear of building - 65% brick, 35% cedar boards
- Left side of building - 62% brick, 32% cedar boards, 6% glazing

Recommendation:

Staff has analyzed the request and recommends **approval** of the Conditional Use Permit for the use of cedar boards and siding as shown by the applicant.
